Assignment 1
HTML and CSS

Problem Statement : Design a portfolio website and host it.

Skills required : HTML and CSS

Deadline for submission : 16.05.21 11:59 p.m

Guidelines:

- Build your portfolio website using only HTML and CSS. **Javascript is purely optional**.

- Since this assignment is for testing your frontend skills,try being as creative as possible. Explore google fonts, favicons, font-awesome icons and CSS animations.

- The website should have at least **4 pages,** including the front page.

- The front page should have your picture along with your name and a line or two describing yourself.

- Create different pages like Academics, Interests, Achievements etc.

- The last page should have links to your github, facebook etc. profiles. This will be named as the 'Contact' page.

- Have a set of hyperlinks to Academics, Contact, Interests etc. on the main page which will take you to the respective pages.

- If you don't have a github account, it would be better to register using your institute email address. Check out the resources section for tutorials on github.

- **Do not use any CSS framework like Bootstrap or softwares like Dreamweaver. Also do not copy the source code (or pre-built templates) of any other website (we will know if you do). Anyone violating this will be removed from the group.**

- Try to use the same CSS style sheet for all the pages. Also, try structuring your code and naming conventions properly so that others find it easy to read.

- If you finish the task before the deadline, try making your website "responsive" (using CSS Media Queries). **This however is not compulsory**.

Submission:

1. Everyone is supposed to upload your assignment to github and host it using **github pages**. **No other hosting service is allowed (if facing any issue using contact any of us).**

2. You can post your links on the **Doubts** channel on Discord first if you want some suggestions on improvements to the website.

3. **Final Submission** of the assignments should be done only through google form whose link will be shared on the **Announcements** channel & **by mail**. (Submit the link to your website by filling the form).

Doubts and help:

- We highly encourage everybody to join on the discord server, the link to which is given in the introductory email. **The doubts channel is the best place to get all your queries solved.**

- Do not copy and paste lines of code or attach a zip file to your posts/queries. **Plagiarism of code is strictly not allowed**.
